

Functional Direction/Training and Presentations

As Head architectural analysis and planning with PWGSC, Bill was the ARO Conservation Champion. Work included provision of expert technical advice and guidance to Parks Canada, designated private sector National Historic sites, and the National Cost Share Program on behalf of the Agency. This advice was also provided to Public Works and Government Services Canada and other government departments. Work also included review of documents prepared by staff and consultants for technical content and compliance with conservation standards. Recently duties included provision of Certification Services on behalf of the Agency for the Canadian Heritage Property Incentive Fund, (CHPIF). This role requires a thorough knowledge of conservation principles and practice as well as the Standards and Guidelines for the Conservation of Historic Places in Canada.

Technical advice and guidance was provided for third party sites - Fort Amherst, the Kirke, and the Anna Templeton Centre in St. John's, NL; the Covenanters Church in Grand Pré; the Little Dutch Church in Halifax; the Knaught-Rhuland House, Lunenburg; the former Federal Building in Truro, NS; and most recently the City of Fredericton.

Bill provided functional review during the preparation of Conservation and Presentation Plans for the National Cost Share Program for St. John's Basilica; St. Dunston's Basilica, St. Anne's Chapel of Ease, the McAdam Railway Station, and the Annapolis County Courthouse. During implementation of the Saint George's Round Church and the Lunenburg Academy projects he provided functional guidance to ensure the heritage character of the resources was maintained. Recent duties included initial inspection services and evaluation of the surviving elements of St. John's Anglican Church in Lunenburg, NS with follow-up presentations to the Historic Sites and Monument's Board of Canada, and worked with the Construction Manager to ensure that the Surviving Values of the building were protected during the \$6 million rehabilitation program.

For the CHPIF program he provided advance consultations to proponents considering submissions, review submissions for compliance with the Standards and Guidelines, and provide confirmation that the work is performed in accordance with the review and conditions of approval for the project.

Basilica Meeting/Exterior Conditions

St. Johns Church Fire Damage/Restoration

Bill has presented at Cultural Resource Management, (CRM) Training Sessions; Federal Heritage Building Review Office, (FHBRO); and specific presentations for the Heritage Property Owner's Association of NS, ICOMOS Canada and APT, Construction Specifications Canada, the City of Summerside, and the Parish of Kingston. See example title pages and outlines on the following pages.

Conservation of Historic Buildings

The purpose of this session is to provide a framework for management of historic buildings in accordance with CRM Policy and the Standards and Guidelines for the Conservation of Historic Places in Canada by:

1. Describing CRM Principles and showing how they apply to maintenance, inspections, interventions and disposal;
2. Reviewing the Standards and Guidelines for the Conservation of Historic Places in Canada and its use;
3. Discussing practical application of the principles in approaches for development and use of a heritage building; and,
4. Providing an overview of some of the factors that influence interventions to heritage buildings and the pressures placed on an owner who develops their building.

Windows – Looking Through the Past

It is fairly common to see the windows replaced in historic buildings because people have been told that they are the main source of their problem. The presentation will discuss the various forms of historic windows with the emphasis on double hung windows. This should provide the information required to make informed decisions when dealing with this historic building element and will include the following topics:

1. Issues, (heat loss, moisture, air movement);
2. Problems, (may account for 1/3 of heat loss);
3. Inspection, (operation, glazing, paint, window sashes, frame, energy efficiency, external conditions);
4. Maintenance, (washing, painting, puttying, oiling of moving parts of metal hardware);
5. Evaluation, (repair, partial replacement, total replacement, modify the openings);
6. Repairs, (sills, frames, sashes, glazing, hardware, improving thermal efficiency);
7. Replacement, (aesthetic criteria, technical criteria).
